DETAILED ACTION

1. This office action is in response to application 10/774853 filed on 02/07/04.

Claims 1-2 remain pending in the application.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Srinivasan Adi (U.S Patent 6701505).

4. As to claim 1, the prior art teaches a method comprising optimizing the selection of functional cells and proposed maximum lengths of conductive paths in an integrated circuit so as to generate an improved netlist and a data file defining groups of conductive paths in said improved netlist (see fig 1, fig2, fig 6 col 1 line 44-60, and col 3 line 7 to col 4 line 15), each group having a defined maximum length or maximum parasitic capacitance loading for conductive paths in said group such that if said integrated circuit is physically defined by a placement and router tool using said improved netlist and said defined maximum lengths or maximum parasitic capacitance loading for conductive paths is used by said placement and router tool (see fig 1, fig 2, fig 4 col 3 line 42 to col 7 line 15, and col 11 line 4 to col 13 line 36), said integrated circuit will meet timing and power constraints established for said integrated circuit (see fig 1, fig 2, fig 4 col 5 line 46 to col 6 line 52, and background).

Art Unit: 2825

***Allowable Subject Matter***

Claim 2 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
